

Island of possibilities

Green SEEDS Erasmus+ KA2 project is looking for **urban classes** (pupils from primary to secondary level) willing to twin with **classes from mountains and small island schools** in order to work on environmental issues through digital storytelling.

Thanks to the Erasmus+ KA2 Green SEEDS project, 20 classes from rural schools have developed 20 SeedQuests, didactic insights into their social, cultural and environmental habitat in the mountains and in small islands. Their schools, in fact, are based in Northern Spain (Vigo), Cyprus, the island of Kios in Greece, the Aosta Valley and the Lessinia mountains in Northern Italy. These rural schools are now looking for urban pupils, from the same country or from abroad, who want to develop their knowledge of this engendered European cultural and environmental heritage.

Rural pupils will present short videos to their urban twins using the digital storytelling technique to describe what they have discovered about their environment. Urban teachers will gather insights into environmental and cultural heritage issues, as well as ready-made lesson-plans to be used in their own classes (SeedQuests).

Rural and urban classes will meet online on the TwinSpace, use foreign language to get to know each other, use digital storytelling to describe their experience and get feedback from twin pupils.

This hopefully will be the basis of a future collaboration between rural and urban schools with a new Erasmus+ project and real mobilities to discover in person what has been presented virtually.
